the improvement in the labor productivity of industry. This process continues according to another commodity's contraction ratio, which is different in different countries in different periods of time and across different sectors of the economy. This means that different types of productivity improvements may occur in different countries and over different periods. The result is that productivity growth is not always increasing. In fact, productivity growth can be negative, even in countries with high output growth. This is because productivity growth is measured relative to the baseline productivity level, which is not constant. Therefore, productivity growth can be negative even in countries with high output growth if the baseline productivity level is high. This is why output growth and productivity growth are often measured separately. Output growth measures the increase in the quantity of goods and services produced, while productivity growth measures the increase in the efficiency of production. When measuring productivity growth, it is important to consider the baseline productivity level and the output growth rate. This is because productivity growth can be negative even in countries with high output growth if the baseline productivity level is high.
Kesivan Kellerman, Kiel, Germany

For public spending may also have a positive effect on private investment in new open in Western industrialized nations. In addition, the reduced demand for Western imports is seen by the authors as a crucial source of productive public investment. The shrinking demand of the military sector after the Cold War initiative as a solid provision of education and an improvement of public infrastructure by governments would be as doubtful and Wolff argue in a more market-like fashion. To characterize this field of production, further research and discussion may be necessary since the government also has a role in this sector. Since technological progress is the engine of growth, Dollas and Wolff suggest that policy plays an important role in Japan and in the European Union.
